# **CITY OF OCALA**

# Water and Wastewater Rate and Fee Study

MAY 1, 2025

# **RAFTELIS**

May 1, 2025

Honorable Mayor and Members of the City Council City of Ocala 110 S.E. Watula Avenue Ocala, FL 34471

## Subject: Water and Wastewater Rate and Fee Study

Ladies and Gentlemen:

We have completed our review of the water and wastewater rates and fees for the City of Ocala's (City) Water Resources Department (System), and our recommendations were presented to the City Council on April 29, 2025 with proposed water, wastewater and reclaimed water rates for adoption on or after October 1, 2025. This report provides a brief narrative that summarizes our review of the City's existing rates and fees for water and wastewater service necessary to meet the projected revenue requirements for fiscal year ending September 30, 2026 (Fiscal Year 2026) through the fiscal year ending September 30, 2030 (Forecast Period). The proposed monthly service rates are proposed for adoption by rate resolution on or after October 1, 2025. Based on discussions with the City's Attorney, the proposed miscellaneous utility fees and system development charges (Impact Fees) will be presented to the City Council under separate fee ordinances, and as such, the miscellaneous utility fees are also recommended for implementation on or after October 1, 2025, which will provide at least a 90-day notice before implementation.

In order to prepare this financial forecast and rate recommendations, we have relied upon certain information and data collected from the City including the City's Comprehensive Annual Financial Reports; the amended Fiscal Year 2025 operating budget; the Capital Improvement Plan; customer statistics; periodic reports; records of operation; and other information and data provided by the City. To the extent we have performed our analyses using the data and information obtained from the City and others, we have relied upon such information to be accurate and no assurances are intended and no representation or warranties are made with respect thereto or the use made herein.

# Introduction

The goal of this study is to assist the City in establishing water and wastewater rates and fees sufficient to recover the cost of operating, maintaining, repairing and financing the water and wastewater systems through Fiscal Year 2030. As outlined in this report, water and wastewater rate and fee adjustments are proposed in order to support the revenue requirements projected for the System, including updated Impact Fees to recover the capacity-related costs to serve new development. The City's current capital improvement program reflects significant capital investments to improve and maintain the City's water and wastewater treatment plants, transmission and collection systems, and lift stations. Based on the projected operating results, the System's

existing rates will not be sufficient to satisfy the projected water and wastewater system revenue requirements (i.e., expenditures) during the Forecast Period without being adjusted.

The following table summarizes the proposed increases in monthly water and wastewater service rates for Fiscal Years 2026 through 2030:

Description	Existing	FY26	FY27	FY28	FY29	FY30
Proposed Residential Bill (6,000 Monthly Gallons) [1]						
Water Bill	\$23.62	\$24.81	\$26.04	\$27.34	\$28.70	\$29.85
Wastewater Bill	\$62.84	\$65.98	\$69.28	\$72.74	\$76.37	\$79.43
Combined Bill	\$86.46	\$90.79	\$95.32	\$100.08	\$105.07	\$109.28
Increase in Residential Monthly Bill		\$4.33	\$4.53	\$4.76	\$4.99	\$4.21
Percent Applied to Monthly Service Rates		5%	5%	5%	5%	CPI – 4% [2]
Average Commercial Increase (with True-up) [3]		6% - 6.5%	6% - 6.5%	6% - 6.5%	6% - 6.5%	5% - 5.5%
Proposed Effective Date		Oct. 2025	Oct. 2026	Oct. 2027	Oct. 2028	Oct. 2029

**Projected Bill Impacts** 

[1] Monthly residential bills may vary over time based on unique water demands, but the proposed adjustments are applied uniformly to all charges. The average residential bill is estimated to equal approximately 6,000 monthly gallons or eight (8) CCF per month.

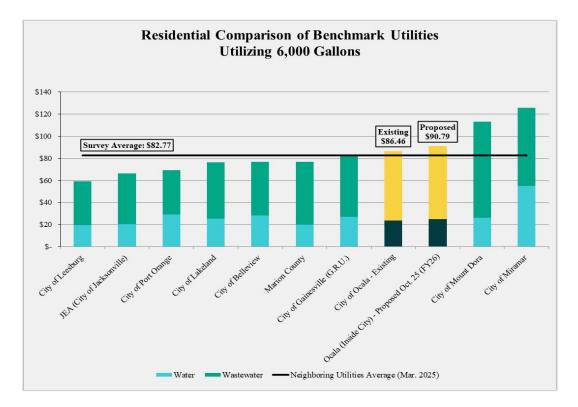

[2] Amount based on the annual US-CPI Water and Sewerage Maintenance Service Index, but not less than four percent (4%) (the recent 10year average).

[3] As outlined in the rate study, Raftelis recommends a true-up to the commercial water usage charge to align with the costs of service. The true-up is allocated over the five- (5) year implementation period which is estimated to result in an additional annual average increase of approximately 1% to 1.5% of the combined bill when also considering the system-wide adjustments.

The City last completed a water and wastewater rate study in Fiscal Year 2021, and the City Council implemented a five- (5) year rate schedule through October 1, 2024 (Fiscal Year 2025). While the City has maintained a balanced utility budget each year, water and wastewater rates have not kept pace with increasing operating costs. For the past several years, revenues have only been adequate to fund operating expenses, existing debt service payments and the General Fund Transfer, and a portion of the annual capital maintenance requirements. The Water Resources Department has primarily funded major capital projects through the use of cash reserves. Based on the use of cash reserves and the amended Fiscal Year 2025 Budget, available cash reserves have been significantly reduced over time, which will limit the City's ability to fund future capital projects without adjusting water and wastewater rates.

The existing and proposed water and wastewater monthly service rates are summarized on Tables 20 and 21 at the end of this report, while detailed residential bill comparisons of existing rates to the proposed water and wastewater monthly service rates are shown on Tables 22 through 24. Based on the proposed rate adjustments

in Fiscal Year 2026, the average residential customer with 6,000 gallons of metered water use (or approximately 8CCF per month) would see the combined monthly water and wastewater bill increase from \$86.46 to \$90.79 on or after October 1, 2025 as shown below:

The study recommendations are based on a financial forecast developed for the water and wastewater systems. The financial forecast starts with the identification of utility operating and capital needs, next considers the capital financing plan and, finally, establishes the timing of rate adjustments. The basis for the rate recommendations is a financial forecast developed for Fiscal Years 2026 through 2030. The City should re-evaluate its rates at least every three (3) to five (5) years to further confirm and refine future rate needs.

The recommendations of this study also include proposed adjustments to the System Impact Fees to be recovered from new development, as well as increases to the existing miscellaneous utility fees and charges, and recommendations to implement new fees for services being provided. The study tasks and recommendations are discussed in more detail in the following sections.

# **Sales Forecast**

Gross revenues under existing rates are estimated over the Forecast Period to average approximately \$54.8 million per year. The projected revenues are based on annual customer growth of 470 accounts per year or an annual average increase in revenues of approximately 1.3%. The majority of revenues are derived from monthly

service rates as shown in Table 1 at the end of this report. The projected revenues are based upon a customer and sales forecast for the water and wastewater systems shown on Tables 2 and 3, respectively. Table 4 provides a summary of other income and funding from miscellaneous utility charges for the Forecast Period. Collectively, these revenue and income sources along with investment earnings comprise the gross revenues of the System as shown below:

As a component of estimating current revenues, Raftelis performed a cost-of-service review. The cost recovery objectives of the review include the following:

- Produce sufficient revenues to meet the projected revenue requirements
- Develop rates based on the full cost recovery of providing water and wastewater service
- Maintain strong revenue stability through the use of a monthly base charge
- Maintain conservation pricing formula to encourage water conservation
- Maintain competitive rates with neighboring utilities

Based on a review of the System revenues by customer class and usage characteristics, Raftelis made the following observations:

- Current rates have strong fixed cost recovery overall
  - The City should continue to apply system-wide revenue adjustments to monthly base charges to maintain revenue stability
- The existing water revenue contribution from commercial customers continues to decline
  - $\circ~$  In FY2018, the average charge per ccf was 88% of the system-average
  - In FY2025, the average charge per ccf is estimated to average 83% of the system-average
  - The FY2025 difference is approximately \$0.56 per ccf

As outlined in this report, Raftelis recommends increasing the commercial usage rate by approximately 56cents over the five- (5) year study period to better realign the costs of service (Commercial True-up). If approved, the annual adjustment would be approximately 11 cents per year or a 1% to 1.5% increase to the typical commercial water and wastewater bill before considering any other system-wide rate adjustments. The "True-up" is estimated to produce additional revenues of approximately \$1.0 million per year by Fiscal Year 2030 helping to offset or lower the system-wide adjustments as commercial customers pick-up their proportionate share of System costs.

# **Revenue Requirements**

The various components of cost associated with operating and maintaining a municipally-owned utility system, as well as the cost of financing the renewal and replacement of facilities and capital improvements for upgrades and expansion, are generally referred to as the utility cash revenue requirements. The sum of these cost components, after adjusting for other income and miscellaneous utility revenues, represents the net revenue requirements. The revenue requirements for this study are predicated on an analysis of water and wastewater costs for the five- (5) fiscal year period ending September 30, 2030 (i.e., Fiscal Years 2026 through 2030 and previously defined as the Forecast Period). The projected revenue requirements included the various generalized cost components described below:

- <u>Operating Expenses</u>: These expenses include the cost of utilities, chemicals, labor, materials, supplies, and other items necessary for the operation and maintenance of the water and wastewater systems.
- <u>Debt Service</u>: Debt service includes the principal and interest on the City's current and any proposed obligations payable from the net operating revenues of the water and wastewater systems.

• <u>Other Revenue Requirements</u>: This component of cost includes, in general, i) any ongoing capital improvements (capital outlay) to be financed from rate revenues; ii) annual transfers into the construction fund to address major capital project costs, including system renewals and replacements; iii) annual transfers to the Renewal and Replacement Fund (the "R&R Fund") to maintain the minimum required balance; and iv) the annual General Fund Transfer.

# PRINCIPAL ASSUMPTIONS AND CONSIDERATIONS

The projected cash revenue requirements as shown on Tables 5 through 7 for the water and wastewater systems reflect certain assumptions, considerations and analyses. The major assumptions, considerations and analyses that are included in the projected revenue requirements for the Forecast Period are as follows:

- 1. The amended Fiscal Year 2025 Budget associated with the operations of the System serves as the basis for the water and wastewater systems' expenditure projections and is shown in detail on Table 8. Unless otherwise noted, the underlying assumptions and expenditure amounts included therein are assumed to be reasonable and reflect anticipated operations. Such budgetary amounts are incorporated into the revenue requirement component of the study, except for adjustments and assumptions as noted hereunder.
- 2. Projected revenues from current rates and charges for the City's water and wastewater systems are based on a projection of customers and as provided by the City. Based on the service area growth forecast shown on Tables 2 and 3 at the end of this report, rate revenues are estimated to increase by approximately 1.3% per year on average as discussed previously.
- 3. The operations and maintenance expenses as provided in the amended 2025 Budget as shown on Table 8, were apportioned between water and wastewater operations based on the assignment of specific costs and certain allocations derived from Table 9. The allocated operating expenses for Fiscal Year 2025 are then projected for the remaining five (5) years of the Forecast Period (i.e., through Fiscal Year 2030) as illustrated on Tables 10 and 11 for the water and wastewater systems, respectively. Based on discussions with City staff, the City plans to implement a one-time base salary adjustment of five percent (5%) in Fiscal Year 2026, which is then followed by annual three percent (3%) cost of living and merit adjustments for Fiscal Years 2027 through 2030. The following list summarizes the other general cost escalation factors that were assumed as derived from Table 12:
  - Employee Insurance = 7.0% Annually
  - Repairs and Utility Costs = 5.0% Annually
  - Utilities = 3.0% + Growth Annually
  - Inflation = Approximately 2.5% Annually

- 4. Based on discussions with City staff, the Water Resources Department also plans to add 26 new employee positions, which includes Service Technicians, Foremen, Water & Wastewater Operators, Equipment Technicians, Plant Supervisor, and other roles. The new positions are phased in over the Forecast Period in order to maintain existing levels of service and to provide for the needs of new customers. Table 13 at the end of this report provides a summary of the proposed positions.
- 5. Beginning in FY2028, the study results also provide for an annual \$1.7 million allowance for incremental operating expenses to support the operation of WTP#2, which is anticipated to be constructed during the Forecast Period.
- 6. Based on the expense assumptions and labor cost estimates provided herein, the amended Fiscal Year 2025 operating expenses are projected to increase approximately 5.8% per year over the Forecast Period.
- 7. The Water Resources Department recently completed an update to the City's water and wastewater master plans that identified and prioritized certain capital maintenance projects, new investments in alternative water supplies, and expansion-related projects to serve new customer growth. The total capital funding program as shown on Table 14 for the Forecast Period totals \$116 million. The amounts provided by City staff were adjusted by five percent (5%) annually to provide a contingency for construction inflation, while also providing a \$1.4 million allowance per year to address facility maintenance, fleet replacement, and other utility related capital outlay. The following list summarizes the major projects:
  - WTP #2 Facility Construction Costs: \$46.4 million
  - Master Plan Improvements: \$24.7 million
  - Water / Sewer Line (R&R) Improvements: \$7.5 million
  - WRF #3 Facility Expansion Design Costs: \$6.6 million
  - NW Ocala Wastewater Modeling Improvements: \$6.2 million
  - Sewer & Reuse Line Extension & Capacity Improvements: \$5.8 million
  - Lift Station Improvement Program: \$4.1 million

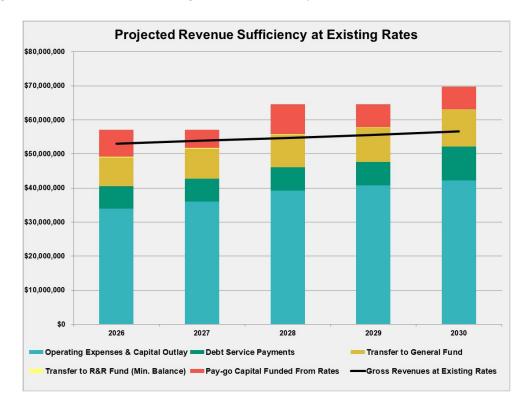

- 8. The major improvements, shown on the previous page, will provide long-term benefits over 30 years or more. In discussion with City staff, Raftelis believes that certain projects are ideal for long-term financing. The following strategies were incorporated into the capital funding program:
  - Water SRF Loan assumed for WTP#2 Expansion
    - i. \$49.7 million (includes fees and capitalized interest)
    - ii. Repayment assumed to begin in FY2030 at \$3.2 million per year
    - iii. Assumes 20-year repayment at 2.5% annual interest
  - Raftelis prioritized the use of wastewater impact fees for recurring capital costs and WRF#3 design
    - i. Beyond FY2025, no wastewater impact fee revenues are available for wastewater and reclaimed water master plan projects
      - 1. Amounts funded through Fund 308 (contributions from rate revenues)
  - Wastewater master plan expenditures exceed \$2.0 million per year by FY2029 / FY2030
    - i. Assumed a Wastewater SRF Loan for the overage
    - ii. \$7.0 million (includes fees and capitalized interest)
    - iii. Repayment assumed to begin in FY2031 at \$0.4 million per year
    - iv. Assumes 20-year repayment at 1.0% annual interest
  - For NW Ocala Wastewater Modeling Improvements of \$6.2 million in FY2027 / FY2028
    - i. Raftelis allocated discretionary reserve funds to meet this short-term requirement
- 9. As shown on Table 15 at the end of this report, the System currently has four (4) senior lien debts outstanding and the annual debt service payments are approximately \$6.7 million per year over the Forecast Period. The estimated additional payments associated with the proposed SRF loans are also summarized on Table 15.
- 10. As shown on Table 16, the System also funds an annual transfer to the City's General Fund based on approximately 15% of the annual gross revenues. The transfer is approved at \$6.1 million for Fiscal Year 2025, and if the proposed rates are adopted, the transfer is projected to increase to approximately \$10.7 million per year by Fiscal Year 2030.

- 11. The City's bond resolution requires that the System maintain a R&R Fund to provide an allowance for ongoing capital repairs and maintenance. By policy, the City restricts approximately five percent (5%) of the previous year's gross revenues in a separate fund to ensure compliance with the minimum balance requirement of the bond resolution, while making additional transfers into the construction fund to meet annual expenditure requirements. As shown on Table 17 at the end of this report, annual transfers into the R&R Fund are projected to be required in order to maintain the appropriate balance over the Forecast Period assuming the proposed rates are implemented. The annual average deposit into the R&R Fund is estimated at \$200,000 per year over the Forecast Period.
- 12. The various components of costs discussed above, which are represented in Tables 8 through 17 of this report, comprise the gross revenue requirements of the System, which are summarized on a combined System-basis on Table 5. The allocated costs for the water and wastewater systems shown on a standalone basis are presented on Tables 6 and 7, respectively.
- 13. Table 18, at the end of this report, provides a detailed projection of the flow of funds between the various utility accounts within the Water Resources Department, while Table 5 provides a summary of the projected year-ending cash and reserve balances for each fund. As shown on Table 5, if the proposed rates are implemented, the water and wastewater systems should have adequate cash reserves in order to meet day-to-day funding needs and any unexpected emergencies requiring immediate financial resources.

The City's adopted operating reserve policy requires a minimum of 90 days of operating expenses be maintained in the operating fund (Fund 455). As summarized on Table 5, if the proposed rates are implemented, the System is projected to maintain a balance that exceeds the minimum requirement over the Forecast Period.

# **Adequacy of Existing Utility Rate Revenues**

As shown on Table 5, based on the forecast of sales and revenues for the water and wastewater systems and the assumptions and considerations set forth herein with respect to the estimation of System revenue requirements, the following chart summarizes the existing revenue deficiency for the Forecast Period:

As shown above for the System, the existing revenues are not adequate to fund the revenue requirements over the Forecast Period. The projected annual deficiency is approximately \$4.0 million or eight percent (8%) of current revenues in Fiscal Year 2026, and the deficiency is projected to increase to approximately \$13.6 million per year by Fiscal Year 2030. The primary reasons for the projected revenue deficiency include the following:

- In the recent past revenues have not kept pace with actual expenditures, and based on the amended Fiscal Year 2025 Budget, current revenues are only adequate to cover operating expenses, debt service payments, the General Fund Transfer and a portion of the capital needs;
- Raftelis recommends financing certain long-lived improvements that will allow the City to phase in rate adjustments over an extended period of time as new debt service payments are incurred;
- City staff is recommending a five percent (5%) one-time base salary adjustment in Fiscal Year 2026, and plans to add new employee positions over the Forecast Period;
- The City is estimated to incur new operating expenses associated with WTP#2; and

• The City's General Fund Transfer, which is based on 15% of annual gross revenues, is projected to increase over the Forecast Period as proposed rates are implemented.

In order to satisfy the projected revenue requirements of the System, the following table summarizes the proposed increases in monthly water and wastewater service rates for Fiscal Years 2025 through 2030:

Description	Existing	FY26	FY27	FY28	FY29	FY30
Proposed Residential Bill (6,000 Monthly Gallons) [1]	-				-	·
Water Bill	\$23.62	\$24.81	\$26.04	\$27.34	\$28.70	\$29.85
Wastewater Bill	\$62.84	\$65.98	\$69.28	\$72.74	\$76.37	\$79.43
Combined Bill	\$86.46	\$90.79	\$95.32	\$100.08	\$105.07	\$109.28
Increase in Residential Monthly Bill		\$4.33	\$4.53	\$4.76	\$4.99	\$4.21
Percent Applied to Monthly Service Rates		5%	5%	5%	5%	CPI – 4% [2]
Average Commercial Increase (with True-up) [3]		6% - 6.5%	6% - 6.5%	6% - 6.5%	6% - 6.5%	5% - 5.5%
Proposed Effective Date		Oct. 2025	Oct. 2026	Oct. 2027	Oct. 2028	Oct. 2029

## **Projected Bill Impacts**

[1] Monthly residential bills may vary over time based on unique water demands, but the proposed adjustments are applied uniformly to all charges. The average residential bill is estimated to equal approximately 6,000 monthly gallons or eight (8) CCF per month.

[2] Amount based on the annual US-CPI Water and Sewerage Maintenance Service Index, but not less than four percent (4%) (the recent 10year average).

[3] As outlined in the rate study, Raftelis recommends a true-up to the commercial water usage charge to align with the costs of service. The true-up is allocated over the five- (5) year implementation period which is estimated to result in an additional annual average increase of approximately 1% to 1.5% of the combined bill when also considering the system-wide adjustments.

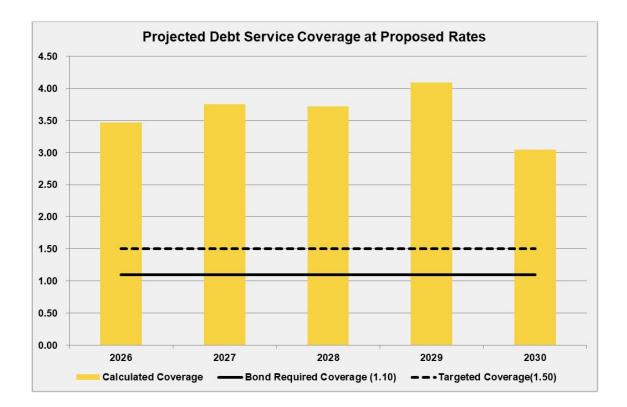

> **Projected Revenue Sufficiency at Proposed Rates** \$80,000,000 \$70,000,000 ---\$60,000,000 \$50,000,000 \$40,000,000 \$30,000,000 \$20,000,000 \$10.000.000 \$0 2026 2028 2029 2030 2027 **Operating Expenses & Capital Outlay Debt Service Payments** Transfer to General Fund Transfer to R&R Fund (Min. Balance) Pay-go Capital Funded From Rates Gross Revenues at Existing Rates - • Gross Revenues at Proposed Rates

If the proposed monthly service rates are adopted and implemented, the following chart summarizes the projected revenue sufficiency under the proposed rates:

# **DEBT SERVICE COMPLIANCE**

In addition to meeting the net revenue requirements (i.e., expenditure requirements), the proposed water and wastewater rates must be sufficient to meet the debt service coverage requirements of the City's existing debt related to the water and wastewater system. The City's bond resolution requires the City to maintain rates adequate to achieve a minimum 1.10 debt service coverage ratio. The debt service coverage ratio as defined in the bond resolution is calculated as a ratio of gross revenues less operating expenses to annual debt service payments. Thus, for each dollar (\$1.00) of annual debt service payments, the rates must produce one dollar and ten cents (\$1.10) of net revenues available to pay such debt service.

As summarized on Table 19, the anticipated gross revenue for the System, assuming that the City adopts the proposed rates in this report, should be adequate for the Forecast Period to meet the debt service requirements of the existing bonds. The projected debt service coverage for the City is summarized on the next page:

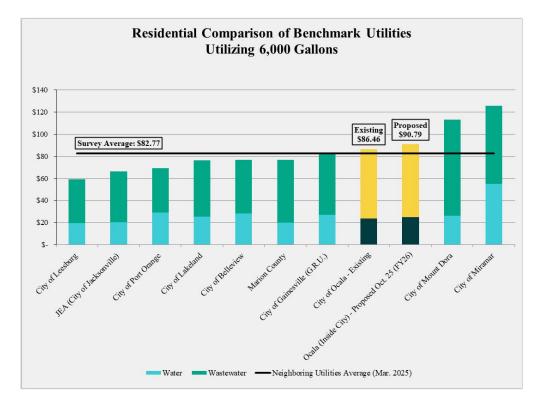

# **Proposed Water and Wastewater Monthly Service Rates**

As discussed earlier, we have calculated rate revenue deficiencies for the water and wastewater systems as shown on Table 5. The proposed adjustments were applied to the existing rates uniformly for all fiscal years beginning on and after October 1, 2025 and each October 1 thereafter. All charges including the monthly base charge and the usage charges are proposed to increased by five percent (5%) each year as shown on Tables 20 and 21 at the end of this report for Fiscal Years 2026 through 2029. Beginning on and after October 1, 2029 (Fiscal Year 2030), the City Council should consider implementing an annual index based on the increase in the US-CPI Water and Sewerage Maintenance Service Index for each calendar year, but not less than four percent (4%).

As outlined in this study, Raftelis also recommends a "true-up" to the commercial water usage charge to align with the costs of service. The true-up is allocated over the five- (5) year implementation period which is estimated to result in an additional annual average increase of approximately 1% to 1.5% of the combined commercial bill when also considering the system-wide adjustments. The overall recommendations result in a series of annual adjustments between 6% and 6.5% for commercial customers through and including Fiscal Year 2029.

Bill comparisons for the typical residential bills are illustrated on Tables 22 through 24 that present the City's existing and proposed rates alongside other benchmark utilities in the area. The proposed rates are estimated to

be sufficient to recover the net revenue requirements discussed in this report and should remain competitive with similar water and wastewater rates charged in other jurisdictions. The following chart summarizes the proposed rates effective on or after October 1, 2025:

# **Proposed System Development Charges**

The City's water and wastewater utility systems, as well as other publicly-owned utility systems, have faced increasing capital commitments necessary to expand water and wastewater system facilities to serve new growth. The utility business is capital intensive and requires the commitment of significant resources to be available in advance of the growth in demand. In addition, System improvements and regulatory compliance also require significant capital expenditures in today's utility business environment. Further, the impact of inflation on System operating expenses and on the cost of new and replacement facilities results in upward pressure on monthly utility user rates. The compelling capital needs associated with the utility business and the desire to control the increase in monthly utility user rates and charges have resulted in the use of funding alternatives such as the City's water and wastewater system development charges (previously defined as Impact Fees) to finance, in part at least, the cost of System expansion.

Based on our experience within the industry, the implementation and use of impact fees should meet the following minimum criteria:

- 1. Require that the calculation of the Impact Fee be based on the most recent and localized data;
- 2. Provide for accounting and reporting of Impact Fee revenues and expenditures in a separate accounting fund;
- 3. Limit administrative charges for the collection of Impact Fees to actual costs, if any; and
- 4. Provide notice no less than 90 days before the effective date of an ordinance or resolution imposing a new or increased Impact Fee.

The City last updated the System Impact Fees in Fiscal Year 2021, and City staff requested that we update the existing fees based on the actual expansion-related costs incurred by the System over time, plus the identified capital improvements within the City's approved CIP that will serve the needs of future customers. In developing our analysis, there are two significant components to be addressed in designing Impact Fees. These two components include: i) the level of service (LOS) to be apportioned to the applicants that request System capacity; and ii) the level or amount of capital costs to be recovered from a new applicant requesting service. Both of these issues are related to the level of the Impact Fee expressed on an equivalent residential unit or ERU basis (the lowest denominator for the fee).

The LOS currently adopted by the City provides up to 300 gallons per day (gpd) of water system capacity and 250 gpd of wastewater system capacity per ERU. As discussed previously in this report, the City recently updated its water and wastewater master plans, and the adopted level of service standards are consistent with the design criteria recommended by the City's consulting engineer. When compared to the water LOS per ERU, the proposed wastewater service level recognizes that a portion of water demands associated with irrigation needs and other discretionary uses does not get returned to the wastewater system.

In the determination of the Impact Fees associated with the serving future customers, the cost of System capacity, if any, available to serve such growth should be considered. Since such capacity is available to serve the near-term incremental growth of the System, it is appropriate to evaluate the capacity availability of such facilities. In order to evaluate the availability of the existing utility plant-in-service to meet future capacity needs, it is necessary to functionalize the assets by specific utility requirement. The functionalization of the existing assets is necessary to: i) identify those assets which should be included in the determination of the Impact Fees; and ii) match existing plant type to the capital improvements to meet future service needs.

As shown on Table 25 at the end of this report, the System has invested \$397 million in total assets, and approximately \$258 million or 65% of the total investment serves the supply, treatment, and transmission needs of the water and wastewater systems. This portion of the assets are considered the "System Costs" whereby all customers generally benefit. The remaining assets were excluded from the Impact Fee calculation since such

investments primarily relate to local or on-site water distribution and wastewater collection system costs that are, generally, contributed or assets that are funded separately.

As with any utility, the City is continually in the process of updating and expanding the water and wastewater plant and transmission facilities to serve increasing demand or capacity requirements. In order to develop an Impact Fee that is consistent with the capital costs of the System, the cost of the City's capital improvements that are anticipated to meet such future needs are reflected in the proposed Impact Fee. Tables 26 and 27 at the end of this report provide a detailed accountability of the City's planned improvements. The improvements are for: i) expansion of the treatment and transmission system to meet the capacity requirements of new development; and ii) upgrades to existing assets which may benefit both current and future users of the System (e.g., a transmission line relocation). Project costs related to the replacement of assets, minor equipment needs or those improvements that are anticipated to be funded from grants were excluded from the list of projects used in this analysis.

Tables 26 and 27 at the end of this report provide a detailed listing of the planned water and wastewater improvements and expansions. As derived from Tables 26 and 27, the City plans to invest approximately \$100.4 million in future improvements that will benefit new customers of the System.

In addition, as shown on Tables 28 and 29 for the water and wastewater systems, respectively, certain Impact Fee credits were recognized to account for historical grant revenues received by the City to construct a portion of the System Costs.

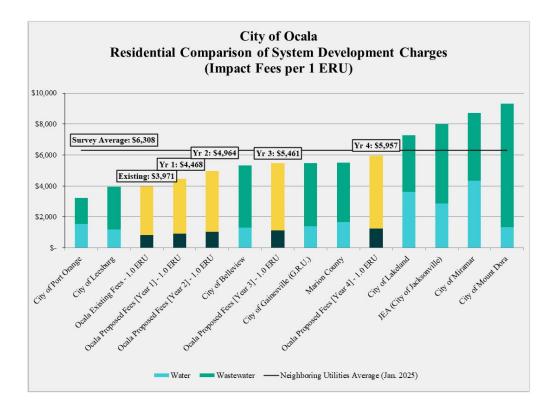

Since the existing Impact Fees have not been adjusted for approximately five (5) years, the calculated water and wastewater System Costs per ERU are significantly greater than the existing Impact Fees as shown below:

Description	Water Fee	Wastewater Fee
Existing Fee per ERU	\$823	\$3,148
Calculated Cost per ERU	\$1,799	\$5,253
Percent Increase	119%	67%
Maximum Charge by Florida Statute (50%)	\$1,235	\$4,722
Required (Equal) Phase-in:		
Proposed Fees per ERU – Year 1	\$926	\$3,542
Proposed Fees per ERU – Year 2	\$1,029	\$3,935
Proposed Fees per ERU – Year 3	\$1,132	\$4,329
Proposed Fees per ERU – Year 4	\$1,235	\$4,722

## **Proposed Development / Impact Fees**

ERU = Equivalent Residential Unit comprised of 300 gallons per day (gpd) of water capacity and 250 gpd of wastewater capacity. Please refer to the detailed fee schedule for each year by customer class and service level.

As shown above, and on Tables 28 and 29 at the end of this report, the calculated cost of providing water and wastewater capacity have increased significantly. Based on advice by the City's legal counsel, the proposed fees include an increase of no greater than 50%, and such implementation is proposed to be phased in over four, equal installment periods. Such advice from the City's legal counsel aligns with provisions governing the adoption and implementation of Municipal Impact Fees provided within the Florida Statutes. Raftelis recommended for implementation beginning on and after October 1, 2025. Table 30 at the end of this report provides a summary of the existing and proposed Impact Fees by customer class and service level, while Table 31 provides a comparison of the proposed fee with the City's benchmark utilities as follows:

# **Proposed Miscellaneous Utility Fees and Charges**

The City maintains a schedule of miscellaneous utility fees and charges that account for direct customer service requirements, including connection charges (tap and/or meter installation fees and service charges), hydrant or jumper fees (temporary meter service), meter test fees, among others. To support this portion of the study, City staff developed a job costing workbook that is included as Appendix A of this report. The workbook was used to compile each cost per service or job as shown on Tables 1 through 8 of Appendix A at the end of this report. Such costs consider the appropriate staffing levels, equipment needs, and materials and supplies for each service.

During this process, City staff also identified services the department provides currently at no charge. Such new service fees reflect customer requested turn-off / turn-on, site visits for investigation, termination of service (demolition), and industrial compliance monitoring.

A summary of the proposed fees is shown on Table 1 of Appendix A at the end of this report. The proposed charges are recommended for implementation on or after October 1, 2025.

# **Conclusions and Recommendations**

Based on our studies, assumptions, considerations, and analyses as summarized herein, Raftelis is of the opinion that:

- 1. The City's existing rates for water and wastewater service will not recover the projected revenue requirements for the fiscal years ending September 30, 2026 through 2030.
- 2. The City should consider adopting the proposed monthly service rates effective for bills rendered on or after October 1, 2025 and each October 1 thereafter.
  - a. Beginning on and after October 1, 2029 (Fiscal Year 2030), the City should consider implementing an annual index based on the increase in the US-CPI Water and Sewerage Maintenance Service Index for each calendar year, but not less than four percent (4%).
- 3. The proposed rates generally produce comparable water and wastewater bills with those of neighboring benchmark utilities.
- 4. The City should also consider implementing the proposed miscellaneous charges and Impact Fees.
  - a. The City should provide at least 90 days notice before implementing the updated Impact Fees.
  - b. The Impact Fees and miscellaneous charges are recommended for implementation on or after October 1, 2025.
- 5. The City should continue to periodically update this study to account for actual operating results and to revisit the City's ability to fund the remaining capital improvement needs.

We appreciate the opportunity to be of service to the City.

Respectfully submitted,

**RAFTELIS FINANCIAL CONSULTANTS, INC.**

#### Footnotes:

[1] Amounts derived from Tables 5 through 7.

[2] Amounts reflect estimated revenues at existing rates.

[3] Amounts include additional revenues to be derived from the proposed system-wide rate increases as follows:

		Projec	ted Fiscal Year En	ding September 30		
	2025	2026	2027	2028	2029	2030
Water System	0.0%	5.0%	5.0%	5.0%	5.0%	4.0%
Effective	October	October	October	October	October	October
Wastewater System	0.0%	5.0%	5.0%	5.0%	5.0%	4.0%
Effective	October	October	October	October	October	October

[4] Amounts includes revenues from water and sewer connection charges, water meter installations, transfer service charges, industrial waste charges, acquisitions and bulk services.

[5] Amounts reflect the annual and maximum debt service payments on existing debts.

#### Footnotes

[1] Existing amounts reflect rates in effect since October 1, 2024. Outside City customers currently pay an additional 25% surcharge.

[2] Amounts are approximately half of the potable irrigation rates.

[3] Large User Service defined as non-pressurized service with an average day demand of 100,000 gallons per day or greater.

[4] Amount initially based on 30% of the variable wastewater treatment plant operating expenses to develop high quality reuse irrigation water.

[1] Unless otherwise noted, amounts shown reflect residential rates in effect Jan. 2025 and are exclusive of taxes or franchise fees, if any, and reflect rates charged for inside the city service. All rates are as reported by the respective utility. This comparison is intended to show comparable charges for similar service for comparison purposes only and is not intended to be a complete listing of all rates and charges offered by each listed utility.

#### **Development of Water System Impact Fee**

Footr	notes:	
[1]	Amount derived from Table 25 and reflects the estimated water production and treatment assets currently in service.	
[2]	Based on discussions with City staff, the near-term capital needs will primarily address system renewal and replacement for the current facilities.	
[3]	Amount reflects the maximum daily flow capacity and the average daily flow capacity based on the peak design relationship of the plant as follows:	
	Peak Day WTP Capacity (MGD) Water Master Plan - Design Peak / Avg. Ratio Estimated WTP Capacity - ADF (MGD)	24.420 <u>1.350</u> 18.089
[4]	Amount estimated based on actual daily flows for Fiscal Year 2023 as provided by the City as follows:	
	Fiscal Year 2023 - Average Daily Flow (MGD)	13.425
[5]	Amount reflects the City's planned and reserved level of service for each ERU, Equivalent Residential Unit, on an average daily basis.	
[6]	Amount derived from Table 26, if any, that reflects expansion related additions to the water production, treatment and/or transmission facilities.	
[7]	Amount, if any, reflects the design capacity of such new facilities as provided by City staff as follows:	
	Phase 1 Peak Day WTP Capacity (MGD) Water Master Plan - Design Peak / Avg. Ratio Estimated WTP Capacity - ADF (MGD)	13.500 <u>1.350</u> 10.000
[8]	Amount based on Table 25 and reflects existing water transmission assets currently in service.	
	Amount derived from Table 2 and reflects the recognized additions to the water transmission system.	
[9]	Total cost of facilities is reduced by grants and other outside funding sources, if any, as provided by the City.	
[10]	Amount reflects the estimated capacity of the existing transmission facilities on an average daily basis.	

#### Development of Wastewater System Impact Fee

Line No.	Description	Combined System
	Wastewater Treatment and Disposal	
	Total Estimated Cost of Existing Wastewater Treatment Facilities:	
1	Cost of Existing Facilities [1]	\$115,205,944
2	Additional Costs Capitalized to Plant in Service [2]	0
3	Less Receipt of Grant Funds [3]	(7,976,344)
4	Subtotal Wastewater Treatment Facilities	\$107,229,600
5	Existing Plant Capacity (MGD) (ADF) [4]	10.500
6	Actual Average Daily Flow (MGD) (ADF) [5]	6.514
7	ERU Factor - (GPD) (ADF) [6]	250
8	Estimated ERUs to be Served by Existing Facilities	42,000
9	Percent Remaining Capacity of Existing Facilities	37.96%
10	Allocation of Existing Facilities to Incremental Growth	\$40,706,399
11	Rate per ERU Associated with Existing Facilities	\$2,553.09
	Total Estimated Cost of Additional Wastewater	
12	Treatment Facilities:	\$6,620,250
12	Cost of Additional Wastewater Treatment Facilities [7] Adjustment	\$6,620,230 \$0
13	Cost of Additional Wastewater Treatment Facilities	\$6,620,250
14	New Plant Capacity (MGD) (ADF) [8]	4.000
16	Estimated ERUs to be Served by Additional Facilities	16,000
17	Weighted Rate per ERU Associated with Additional Facilities	\$207.25
18	Proposed Rate per ERU Allocable to Wastewater Treatment Facilities	\$2,760.34
	Wasetwater Transmission Facilities	
	Primary Collection System:	
19	Existing Facilities [9]	\$77,678,090
20	Additional Costs Capitalized to Transmission Facilities [7]	31,592,824
20	Less Receipt of Grant Funds [10]	(4,563,382)
21	Total Primary Collection Facility Costs	\$104,707,532
23	Estimated Transmission Capacity (MGD) (ADF) [11]	10.500
23 24	ERU Factor - (GPD) (ADF) [6]	250
24	Estimated ERUs to be Served by Existing Facilities	42,000
26	Rate per ERU Associated with Transmission Facilities	\$2,493.04
		<b></b>
27	Total Combined Rate per ERU	\$5,253.38

#### **Development of Wastewater System Impact Fee**

#### Footnotes:

- [1] Amount derived from Table 25 and reflects estimated treatment and disposal assets currently in service.
- [2] Based on discussions with City staff, the near-term capital needs will primarily address system renewal and replacement for the existing facilities.
- [3] Total cost of existing facilities is reduced by grants and other outside funding sources, if any, as provided by the City.
- [4] Total wastewater treatment and disposal capacity calculated as follows:

	Capacity
Sewer Facility:	(MGD-AADF)
WRF #1	0.000
WRF #2	6.500
WRF #3	4.000
Total	10.500

[5] Amount estimated based on actual daily flows during Fiscal Year 2023 as follows:

	Treated Flows
Sewer Facility:	(MGD-ADF)
WRF #1	0.000
WRF #2	4.341
WRF #3	2.173
Total	6.514

- [6] Amount reflects the City's planned and reserved level of service for each ERU, Equivalent Residential Unit, on an average daily basis.
- [7] Amount derived from Table 27, if any, that reflects expansion related additions to the wastewater treatment and/or transmission facilities.
- [8] Amount, if any, reflects the design capacity of such new facilities as provided by City staff.
- [9] Amount based on Table 25 and reflects existing sewer transmission assets currently in service.
- [10] Total cost of facilities is reduced by grants and other outside funding sources, if any, as provided by the City.
- Amount reflects the estimated capacity of the transmission facilities on an average daily basis.

33	Discharge Customers	N/A	N/A	\$360.00 [13]
34	Non-Discharge Customers	N/A	N/A	\$125.00 [13]
51	Tion Dibenninge Customers	10/1	1011	\$125.00 [15]

#### Footnotes:

[1] Amounts derived from Table 2.

[2] Based on discussions with City staff, no change to the proposed fee is recommended.

[3] Amounts based on the cost of the portable meter, but since meter costs are changing frequently, we recommend

the actual cost plus estimated sales for the average 6-month billing period or \$1,000.

[4] Amount represents approximately half of the minimum monthly base charge for temporary water service of a 3-inch service connection.

[5] Amount derived from Table 3.

[6] Amounts derived from Table 4.

[7] Amounts derived from Table 5. Services include, but not limited to, replacement of water leak investigation, sewer stoppage investigations, and other customer requested site visits not to exceed 1 hour.

[8] Amounts derived from Table 6, which includes both the disconnect and reconnection of the service. Proposed amounts reduced to be consistent with other fee types even though 2 activities occur.

[9] Amounts based on discussions with City staff. Account holder and/or property owner responsible for the actual costs to replace utility equipment, estimated water use under the current rates for service, and any other penalties allowed under law.

[10] Actual amounts based on recent workorders.

[11] Amounts derived from Table 7.

[12] Amounts derived from Table 8, which are incurred in addition to any Permit Application Fee.

[13] Amount set equal to half (50%) the initial Permit Application Fee.
