For Institutional Use Only.

Alpha: Alpha measures a manager's rate of return in excess of that which can be explained by its systematic risk, or Beta. It is a result of regressing a manager's returns against those of a benchmark index. A positive alpha implies that a manager has added value relative to its benchmark on a risk-adjusted basis.

Beta: Beta measures a manager's sensitivity to systematic, or market risk. Beta is a result of the analysis regressing a manager's returns against those of a benchmark Index. A manager with a Beta of 1 should move perfectly with a benchmark. A Beta of less than 1 implies that a manager's returns are less volatile than the market's (i.e., selected benchmarks). A Beta of greater than 1 implies that a manager exhibits greater volatility than the market (i.e., selected benchmark).

Best (Worst) Quarter: Best (Worst) Quarter is the best (worst) three-month return in the measurement period. The three-month period is not necessarily a calendar quarter.

Bloomberg U.S. Aggregate Index: Measures the investment-grade, U.S. dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related and corporate securities, mortgage pass through securities, commercial mortgage backed securities and asset backed securities that are publicly for sale in the United States.

Capture Ratio: Up Market Capture is the average return of a manager relative to a benchmark index using only periods where the benchmark return was positive. Down Market Capture is the average return of a manager relative to a benchmark index using only periods where the benchmark return was negative. An Up Market Capture of greater than 100% and a Down Market Capture of less than 100% is considered desirable.

Consistency (Batting Average): Formerly known as Batting Average, Consistency measures the percentage of time an active manager outperforms the benchmark.

Duration: A measure of interest rate risk or the price sensitivity of a bond to interest rate changes.

FTSE NAREIT All Equity REITs TR USD Index: Measures the performance of all tax-qualified REITs with more than 50 percent of total assets in qualifying real estate assets other than mortgages secured by real property that also meet minimum size and liquidity criteria. A REIT is a company that owns, and in most cases, operates income-producing real estate.

Information Ratio: The Information Ratio measures a manager's excess return over the passive index divided by the volatility of that excess return, or Tracking Error. To obtain a higher Information Ratio, which is preferable, a manager must demonstrate the ability to generate returns above its benchmark while avoiding large performance swings relative to that same benchmark.

Maximum Drawdown: The Maximum Drawdown measures the maximum observed percentage loss from a peak to a trough in the measurement period.

Maximum Drawdown Recovery Period: The Maximum Drawdown Recovery period counts the number of months needed to meet or exceed the prior peak starting from the beginning of the Maximum Drawdown period. If the prior peak has not been met or exceeded, this statistic will not populate.

MSCI EAFE Index: Measures the performance of the large- and mid-cap equity market across 21 developed markets around the world, excluding the U.S. and Canada. It is a free float-adjusted market-capitalization weighted index and includes the reinvestment of dividends into the index.

Merrill Lynch 3-Month Treasury Bill: Measures the performance of a single issue of outstanding treasury bill that matures closest to, but not beyond, three months from the rebalancing date. The issue is purchased at the beginning of the month and held for a full month; at the end of the month that issue is sold and rolled into a newly selected issue.

PCE Inflation: Refers to the Personal Consumption Expenditures index which tracks the changes in prices of goods and services consumed by households on a year-over-year basis.

Percentile Rank: Percentile Rankings are based on a manager's performance relative to all other available funds in its universe. Percentiles range from 1, being the best, to 100 being the worst. A ranking in the 50th percentile or above demonstrates that the manager has performed better on a relative basis than at least 50% of its peers.

Positive (Negative) Months Ratio: Positive (Negative) Months Ratio is the ratio of months in the measurement period where the returns are positive (negative).

Risk-Adjusted Performance: Risk-adjusted Performance, or RAP, measures the level of return that an investment option would generate given a level of risk equivalent to the benchmark index.

R-Squared: R-squared measures the portion of a manager's movements that are explained by movements in a benchmark index. R-squared values range from 0 to 100. An R-squared of 100 means

that all movements of a manager are completely explained by movements in the index. This measurement is identified as the coefficient of determination from a regression equation. A high R-squared value supports the validity of the Alpha and Beta measures, and it can be used as a measure of style consistency.

Russell 1000® Index: Measures the performance of the large-cap segment of the U.S. equity universe. The Russell 1000® Index is a subset of the Russell 3000® Index which is designed to represent approximately 98% of the investable U.S. equity market. It includes approximately 1,000 of the largest securities based on a combination of their market cap and current index membership.

Russell 1000® Growth Index: Measures the performance of the large cap growth segment of U.S. equities. It includes the Russell 1000 companies with relatively higher price-to-book ratios, higher forecast medium term (2 year) growth and higher sales per share historical growth (5 years).

Russell 1000® Value Index: Measures the performance of the large cap value segment of the U.S. equity universe. It includes the Russell 1000 companies with relatively lower price-to-book ratios, lower forecast medium term (2 year) growth and lower sales per share historical growth (5 years).

Russell 2000® Index: Measures the performance of the 2,000 smallest companies in the Russell 3000® Index. It is a market-capitalization weighted index.

Russell 2000® Growth Index: Measures the performance of the small cap growth segment of U.S. equities. It includes those Russell 2000 companies with relatively higher price-to-book ratios, higher forecast medium term (2 year) growth and higher sales per share historical growth (5 years).

Russell 2000® Value Index: Measures the performance of the small cap value segment of U.S. equities. It includes the Russell 2000 companies with relatively lower price-to-book ratios, lower forecast medium term (2 year) growth and lower sales per share historical growth (5 years).

Russell 3000® Index: Measures the performance of the largest 3,000 U.S. companies designed to represent approximately 98% of the investable U.S. equity market.

Russell Mid-Cap® Growth Index: Measures the performance of the mid-cap growth segment of the U.S. equity universe. It includes those Russell Mid-cap Index companies with relatively higher price-to-book ratios, higher I/B/E/S forecast medium term (2 year) growth and higher sales per share historical growth (5 years).

Russell Mid-Cap® Value Index: Measures the performance of the mid-cap value segment of the U.S. equity universe. It includes those Russell Mid-cap Index companies with relatively lower price-to-book ratios, lower I/B/E/S forecast medium term (2 year) growth and lower sales per share historical growth (5 years).

S&P 500® Index: Measures the performance of 500 leading publicly traded U.S. companies from a broad range of industries. It is a float-adjusted market-capitalization weighted index.

Sharpe Ratio: Sharpe ratio measures a manager's return per unit of risk, or standard deviation. It is the ratio of a manager's excess return above the risk-free rate divided by a manager's standard deviation. A higher Sharpe ratio implies greater manager efficiency.

Standard Deviation: Standard Deviation is a measure of the extent to which observations in a series vary from the arithmetic mean of the series. This measure of volatility or risk allows the estimation of a range of values for a manager's returns. The wider the range, the

more uncertainty, and, therefore, the riskier a manager is assumed to be.

Tracking Error: Tracking Error is the standard deviation of the portfolio's residual (i.e. excess) returns. The lower the tracking error, the closer the portfolio returns have been to its risk index. Aggressively managed portfolios would be expected to have higher tracking errors than portfolios with a more conservative investment style.

Treynor Ratio: The Treynor Ratio is a measure of reward per unit of risk. With Treynor, the numerator (i.e. reward) is defined as the excess return of the portfolio versus the risk-free rate. The denominator (i.e. risk) is defined as the portfolio beta. The result is a measure of excess return per unit of portfolio systematic risk. As with Sharpe and Sortino ratios, the Treynor Ratio only has value when it is used as the basis of comparison between portfolios. The higher the Treynor Ratio, the better.

Yield to Worst: Indicates the lowest potential return an investor can achieve on a bond, assuming the issuer does not default, and accounting for any prepayment or call provisions.

Bloomberg: - BLOOMBERG® and the indices referenced herein (the “Indices”, and each such index an “Index”) are service marks of Bloomberg Finance L.P. and its affiliates (collectively “Bloomberg”) and/or one or more third-party providers (each such provider a “Third-Party Provider”), and have been licensed for use for certain purposes to CAPFINANCIAL PARTNERS LLC (the “Licensee”). To the extent a Third-Party Provider contributes intellectual property in connection with an Index, such third-party products, company names, and logos are trademarks or service marks and remain the property of such Third-Party Provider. Bloomberg or Bloomberg’s licensors own all proprietary rights in Bloomberg Indices. Neither Bloomberg nor Bloomberg’s licensors, including any Third-Party Provider, approves or endorses this material, guarantees the accuracy or completeness of any information herein, or makes any warranty, express or implied, regarding results obtained therefrom. To the maximum extent allowed by law, neither Bloomberg nor Bloomberg’s licensors, including any Third-Party Provider, shall have any liability or responsibility for any injury or damages arising in connection therewith.

MSCI - Certain information contained herein (the “Information”) is sourced from/copyright of MSCI Inc., MSCI ESG Research LLC, or their affiliates (“MSCI”), or information providers (together the “MSCI Parties”) and may have been used to calculate scores, signals, or other indicators. The Information is for internal use only and may not be reproduced or disseminated in whole or part without prior written permission. The Information may not be used for, nor does it constitute, an offer to buy or sell, or a promotion or recommendation of, any security, financial instrument or product, trading strategy, or index, nor should it be taken as an indication or guarantee of any future performance. Some funds may be based on or linked to MSCI indexes, and MSCI may be compensated based on the fund’s assets under management or other measures. MSCI has established an information barrier between index research and certain Information. None of the Information in and of itself can be used to determine which securities to buy or sell or when to buy or sell them. The Information is provided “as is” and the user assumes the entire risk of any use it may make or permit to be made of the Information. No MSCI Party warrants or guarantees the originality, accuracy and/or completeness of the Information and each expressly disclaims all express or implied warranties. No MSCI Party shall have any liability for any errors or omissions in connection with any Information herein, or any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Past performance is no guarantee of future results. The opinions presented cannot be viewed as an indicator of future performance. This material represents an assessment of the market environment at a specific time and is not intended to be a forecast or guarantee of future results.

Investing involves risk, including possible loss of principal. Asset allocation and diversification do not ensure a profit or protect against loss.

Indexes are unmanaged, do not incur management fees, costs, and expenses, and cannot be invested in directly.

In general, the bond market is volatile, and fixed income securities carry interest rate risk. (As interest rates rise, bond prices usually fall, and vice versa. This effect is usually more pronounced for longer-term securities). Fixed income securities also carry inflation risk, liquidity risk, call risk and credit and default risks for both issuers and counterparties. Lower-quality fixed income securities involve greater risk of default or price changes due to potential changes in the credit quality of the issuer. Foreign investments involve greater risks than U.S. investments, and can decline significantly in response to adverse issuer, political, regulatory, market, and economic risks. Any fixed-income security sold or redeemed prior to maturity may be subject to loss.

Any reference to credit ratings refers to the highest rating given by one of the following national rating agencies: S&P, Moody's or Fitch. Credit ratings are subject to change. AAA, AA, A and BBB are investment grade ratings; BB, B, CCC, CC, C and D are below-investment grade ratings (S&P and Fitch ratings). Aaa, Aa, A, Baa, Ba, B, Caa, Ca, C (Moody's ratings).

Investment advisory services offered by CapFinancial Partners, LLC ("CAPTRUST" or "CAPTRUST Financial Advisors"), an investment advisor registered with the SEC under The Investment Advisers Act of 1940.
