For Institutional Use Only.

**ALPHA**

Alpha measures a manager's rate of return in excess of that which can be explained by its systematic risk, or Beta. It is a result of regressing a manager's returns against those of a benchmark index. A positive alpha implies that a manager has added value relative to its benchmark on a risk-adjusted basis.

**BETA**

Beta measures a manager's sensitivity to systematic, or market risk. Beta is a result of the analysis regressing a manager's returns against those of a benchmark Index. A manager with a Beta of 1 should move perfectly with a benchmark. A Beta of less than 1 implies that a manager's returns are less volatile than the market's (i.e., selected benchmarks). A Beta of greater than 1 implies that a manager exhibits greater volatility than the market (i.e., selected benchmark).

**BEST (WORST) QUARTER**

Best (Worst) Quarter is the best (worst) three-month return in the measurement period. The three-month period is not necessarily a calendar quarter.

**CONSISTENCY (BATTING AVERAGE)**

Formerly known as Batting Average, Consistency measures the percentage of time an active manager outperforms the benchmark.

**CAPTURE RATIO**

Up Market Capture is the average return of a manager relative to a benchmark index using only periods where the benchmark return was positive. Down Market Capture is the average return of a manager relative to a benchmark index using only periods where the benchmark return was negative. An Up Market Capture of greater than 100% and a Down Market Capture of less than 100% is considered desirable.

**INFORMATION RATIO**

The Information Ratio measures a manager's excess return over the passive index divided by the volatility of that excess return or Tracking Error. To obtain a higher Information Ratio, which is preferable, a manager must demonstrate the ability to generate returns above its benchmark while avoiding large performance swings relative to that same benchmark.

**MAXIMUM DRAWDOWN**

The Maximum Drawdown measures the maximum observed percentage loss from a peak to a trough in the measurement period.

**MAX DRAWDOWN RECOVERY PERIOD**

The Maximum Drawdown Recovery period counts the number of months needed to meet or exceed the prior peak starting from the beginning of the Maximum Drawdown period. If the prior peak has not been met or exceeded, this statistic will not populate.

**PERCENTILE RANK**

Percentile Rankings are based on a manager's performance relative to all other available funds in its universe. Percentiles range from 1, being the best, to 100 being the worst. A ranking in the 50th percentile or above demonstrates that the manager has performed better on a relative basis than at least 50% of its peers.

**POSITIVE (NEGATIVE) MONTHS RATIO**

Positive (Negative) Months Ratio is the ratio of months in the measurement period where the returns are positive (negative).

**RISK-ADJUSTED PERFORMANCE**

Risk-adjusted Performance, or RAP, measures the level of return that an investment option would generate given a level of risk equivalent to the benchmark index.

**R-SQUARED**

R-squared measures the portion of a manager's movements that are explained by movements in a benchmark index. R-squared values range from 0 to 100. An R-squared of 100 means that all movements of a manager are completely explained by movements in the index. This measurement is identified as the coefficient of determination from a regression equation. A high R-squared value supports the validity of the Alpha and Beta measures, and it can be used as a measure of style consistency.

CONTINUED...

---

**SHARPE RATIO**

Sharpe ratio measures a manager's return per unit of risk, or standard deviation. It is the ratio of a manager's excess return above the risk-free rate divided by a manager's standard deviation. A higher Sharpe ratio.

---

**STANDARD DEVIATION**

Standard Deviation is a measure of the extent to which observations in a series vary from the arithmetic mean of the series. This measure of volatility or risk allows the estimation of a range of values for a manager's returns. The wider the range, the more uncertainty, and, therefore, the riskier a manager is assumed to be.

---

**TRACKING ERROR**

Tracking Error is the standard deviation of the portfolio's residual (i.e. excess) returns. The lower the tracking error, the closer the portfolio returns have been to its risk index. Aggressively managed portfolios would be expected to have higher tracking errors than portfolios with a more conservative investment style..

---

**TREYNOR RATIO**

The Treynor Ratio is a measure of reward per unit of risk. With Treynor, the numerator (i.e. reward) is defined as the excess return of the portfolio versus the risk-free rate. The denominator (i.e. risk) is defined as the portfolio beta. The result is a measure of excess return per unit of portfolio systematic risk. As with Sharpe and Sortino ratios, the Treynor Ratio only has value when it is used as the basis of comparison between portfolios. The higher the Treynor Ratio, the better.

**Bloomberg U.S. Aggregate Index:** Measures the investment-grade, U.S. dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related and corporate securities, mortgage pass through securities, commercial mortgage backed securities and asset backed securities that are publicly for sale in the United States.

**FTSE NAREIT All Equity REITs TR USD Index:** Measures the performance of all tax-qualified REITs with more than 50 percent of total assets in qualifying real estate assets other than mortgages secured by real property that also meet minimum size and liquidity criteria. A REIT is a company that owns, and in most cases, operates income-producing real estate.

**MSCI EAFE Index:** Measures the performance of the large- and mid-cap equity market across 21 developed markets around the world, excluding the U.S. and Canada. It is a free float-adjusted market-capitalization weighted index and includes the reinvestment of dividends into the index.

**Merrill Lynch 3-Month Treasury Bill:** Measures the performance of a single issue of outstanding treasury bill that matures closest to, but not beyond, three months from the rebalancing date. The issue is purchased at the beginning of the month and held for a full month; at the end of the month that issue is sold and rolled into a newly selected issue.

**Russell 1000® Index:** Measures the performance of the large-cap segment of the U.S. equity universe. The Russell 1000® Index is a subset of the Russell 3000® Index which is designed to represent approximately 98% of the investable U.S. equity market. It includes approximately 1,000 of the largest securities based on a combination of their market cap and current index membership.

**Russell Mid-Cap® Growth Index:** Measures the performance of the mid-cap growth segment of the U.S. equity universe. It includes those Russell Mid-cap Index companies with relatively higher price-to-book ratios, higher I/B/E/S forecast medium term (2 year) growth and higher sales per share historical growth (5 years).

**Russell Mid-Cap® Value Index:** Measures the performance of the mid-cap value segment of the U.S. equity universe. It includes those Russell Mid-cap Index companies with relatively lower price-to-book ratios, lower I/B/E/S forecast medium term (2 year) growth and lower sales per share historical growth (5 years).

**Russell 1000® Value Index:** Measures the performance of the large cap value segment of the U.S. equity universe. It includes the Russell 1000 companies with relatively lower price-to-book ratios, lower forecast medium term (2 year) growth and lower sales per share historical growth (5 years).

**Russell 1000® Growth Index:** Measures the performance of the large cap growth segment of U.S. equities. It includes the Russell 1000 companies with relatively higher price-to-book ratios, higher forecast medium term (2 year) growth and higher sales per share historical growth (5 years).

**Russell 2000® Index:** Measures the performance of the 2,000 smallest companies in the Russell 3000® Index. It is a market-capitalization weighted index.

**Russell 2000® Value Index:** Measures the performance of the small cap value segment of U.S. equities. It includes the Russell 2000 companies with relatively lower price-to-book ratios, lower forecast medium term (2 year) growth and lower sales per share historical growth (5 years).

**Russell 2000® Growth Index:** Measures the performance of the small cap growth segment of U.S. equities. It includes those Russell 2000 companies with relatively higher price-to-book ratios, higher forecast medium term (2 year) growth and higher sales per share historical growth (5 years).

**Russell 3000® Index:** Measures the performance of the largest 3,000 U.S. companies designed to represent approximately 98% of the investable U.S. equity market.

**S&P 500® Index:** Measures the performance of 500 leading publicly traded U.S. companies from a broad range of industries. It is a float-adjusted market-capitalization weighted index.

## General Disclosure

The information published herein is provided for informational purposes only, and does not constitute an offer, solicitation, or recommendation to sell or an offer to buy securities, investment products, or investment advisory services. Data contained herein from third-party providers is obtained from what are considered reliable sources. However, its accuracy, completeness, or reliability cannot be guaranteed. Nothing contained herein constitutes financial, legal, tax, or other advice. Consult your tax and legal professional for details on your situation.

Past performance is no guarantee of future results. The opinions presented cannot be viewed as an indicator of future performance. This material represents an assessment of the market environment at a specific time and is not intended to be a forecast or guarantee of future results.

Investing involves risk, including possible loss of principal. Asset allocation and diversification do not ensure a profit or protect against loss.

Indexes are unmanaged, do not incur management fees, costs, and expenses, and cannot be invested in directly.

In general, the bond market is volatile, and fixed income securities carry interest rate risk. (As interest rates rise, bond prices usually fall, and vice versa. This effect is usually more pronounced for longer-term securities). Fixed income securities also carry inflation risk, liquidity risk, call risk and credit and default risks for both issuers and counterparties. Lower-quality fixed income securities involve greater risk of default or price changes due to potential changes in the credit quality of the issuer. Foreign investments involve greater risks than U.S. investments, and can decline significantly in response to adverse issuer, political, regulatory, market, and economic risks. Any fixed-income security sold or redeemed prior to maturity may be subject to loss.

Any reference to credit ratings refers to the highest rating given by one of the following national rating agencies: S&P, Moody's, or Fitch. Credit ratings are subject to change. AAA, AA, A, BBB (ratings scale used by S&P and Fitch), and Aaa, Aa, A, Baa (ratings scale used by Moody's) are investment grade ratings. BB, B, CCC, CC, C, D (ratings scale used by S&P and Fitch), and Ba, B, Caa, Ca, C (ratings scale used by Moody's) are below investment grade ratings.

Investment advisory services offered by CapFinancial Partners, LLC ("CAPTRUST" or "CAPTRUST Financial Advisors"), an investment advisor registered with the SEC under The Investment Advisers Act of 1940.
